## 1 What is this?

I'm coding a program to get the complex refractive index n=n\*ik from the ellipsometric parameters  $\Delta$  and  $\Psi$  I got from a simulation.

### 2 Imports:

```
import numpy as np
import matplotlib
from matplotlib import pyplot
```

### 3 Defining some variables:

Defining some variables for later use:

```
CSVFILE = "head300nmSiO2.csv"
phi_i = 70 * np.pi / 180
d_L = 300
n_air = 1
rerange = 5
imrange = 5
i = 0
```

#### 4 Read .csv-file:

```
Read the values into a two dimensional numpy array as [[lambda,Psi,Delta,n_{S,kS}],...] (Skip columns 3 and 4)
```

```
csv = np.loadtxt(CSVFILE, usecols=(0,1,2,5,6), delimiter=",", skiprows=1)
:DEBUG: The array looks like this:
```

print(csv)

```
300
      55.2217535
                    84.37228319
                                  2.6726

```

#### Calculate $\rho$ 5

### 5.1 Create a matrix containing every possible refractive index (n+ik):

```
lsp_re = np.linspace(0.1, rerange, 101)
lsp_im = np.linspace(0.1, imrange, 101)
re, im = np.meshgrid (lsp_re, lsp_im, copy=False)
matrix = 1j * im + re
   This gives the following matrix:
print(matrix)
[[0.1 + 0.1]]
               0.149+0.1j 0.198+0.1j ... 4.902+0.1j 4.951+0.1j
       +0.1j ]
  5.
 [0.1 + 0.149j \ 0.149+0.149j \ 0.198+0.149j \ \dots \ 4.902+0.149j \ 4.951+0.149j
       +0.149i]
 [0.1 +0.198j 0.149+0.198j 0.198+0.198j ... 4.902+0.198j 4.951+0.198j
  5.
       +0.198j]
 [0.1 +4.902; 0.149+4.902; 0.198+4.902; ... 4.902+4.902; 4.951+4.902;
  5.
       +4.902j]
 [0.1 +4.951j 0.149+4.951j 0.198+4.951j ... 4.902+4.951j 4.951+4.951j
       +4.951j]
              0.149+5.j 0.198+5.j ... 4.902+5.j 4.951+5.j
```

#### 5.2 Calculate:

+5.j

[0.1 + 5.j]

5.

#### 5.2.1 By using Snell's Law to calculate the refractive angles inside the media.

Phi is the incident angle for the layer, n1 and n2 are refractive indices of first and second medium. Returns the angle of refraction.

```
def snell(phi, n1, n2):
    phi_ref = np.arcsin((np.sin(phi) * n1) / n2)
    return phi_ref
```

#### 5.2.2 TODO Calculate $r_p$ and $r_s$ with Fresnel equations:

```
def fresnel(n1, phi1, n2, phi2):
    return rs, rp
```

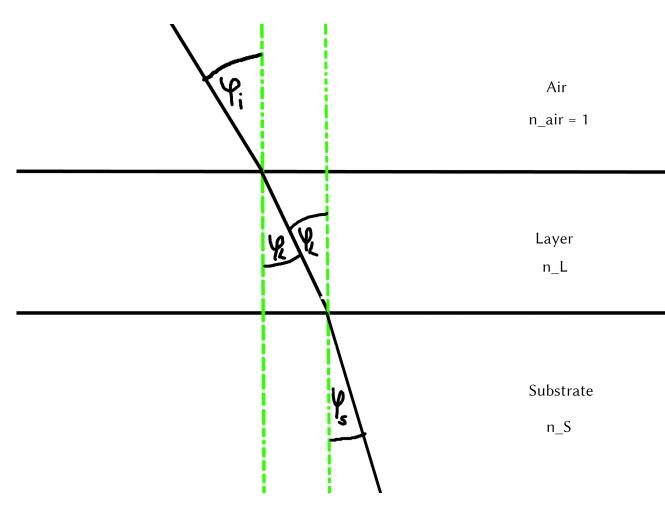

Figure 1: Snell's Law

#### 5.2.3 TODO Calculate $\rho$ after Fujiwara [?]:

5.2.4 TODO Wrap a for-loop around these functions to calculate  $\rho$  for every  $n_L$  in the matrix

```
n_S = (csv[i,3] + 1j* csv[i,4])
lambda_vac = csv[i,0]
for n_L in matrix.flat:
                                        phi_L = snell(phi_i,n_air,n_L)
                                        phi_S = snell(phi_L,n_L,n_S)
                                        # Fresnel equations:
                                         # air/layer:
                                         rs_al = (n_air * np.cos(phi_i) - n_L * np.cos(phi_L)) / (n_air * np.cos(phi_i) + n_L * np.cos(phi_i) / (n_air * np.co
                                         rp_al = (n_L * np.cos(phi_i) - n_air * np.cos(phi_L)) / (n_L * np.cos(phi_i) + n_air * np.cos(phi_L)) / (n_L * np.cos(phi_L)) + n_air * np.cos(phi_L) / (n_L * np.cos(phi_L)
                                         # layer/substrate:
                                         rs_ls = (n_L * np.cos(phi_L) - n_S * np.cos(phi_S)) / (n_L * np.cos(phi_L) + n_S
                                         rp_ls = (n_S * np.cos(phi_L) - n_L * np.cos(phi_S)) / (n_S * np.cos(phi_L) + n_L
